MINIMUM FLOW RELEASE FROM THE GREENWOOD RESERVOIR TO THE MIDDLE BRANCH ESCANABA RIVER REDUCED BECAUSE OF DROUGHT CONDITIONS. On December 14, 2006, the Michigan Department of Environmental Quality's Land and Water Management Division (LWMD) authorized the temporary reduction of the minimum flow release to the Middle Branch Escanaba River. This action is in response to a petition from the Tilden Mining Company. The LWMD concurs that the watershed is experiencing a severe drought; and if weather conditions do not improve, there is a risk that the Greenwood Reservoir will reach conservation pool elevations during the critical winter months in 2007. The required minimum flow release from December 16, 2006, until March 31, 2007, will be based on the following methodology. The release rate will be adjusted once per week. The minimum flow release shall at least equal the average of the previous

LAND AND WATER MANAGEMENT DIVISION

seven days flow, as measured at the U.S. Geological Survey stream gage #04057800, Middle Branch Escanaba River, near Humboldt. In no case shall the flow release be less than 12 cfs. The maximum required flow release is 24 cfs. This authorization is pursuant to the Tilden Mining Company's Amended Order and Permit dated November 2, 1998, issued under the authority of Part 35, Use of Water in Mining Low-Grade Ore, of the Natural Resources and Environmental Protection Act, 1994 PA 451, as amended. Information Contact: **David A. Hamilton**, 517-335-3174.

THE LAND AND WATER MANAGEMENT DIVISION HAS CERTIFIED TO THE DEQ DIRECTOR THAT IT HAS SUBSTANTIALLY COMPLETED ITS INVENTORY OF WETLANDS AS OF JANUARY 1, 2007. Final wetland inventory maps can be accessed electronically or requested in paper format at cost at www.michigan.gov/deqwetlands. Now that the inventory is complete, all non-contiguous wetlands over five acres in size will be regulated regardless of county population, making regulatory requirements uniform in all counties.
